

GenAI

An immersive shopping experience that is not only personalized, but also predictive to individual needs.

Shoppers want you to make it easier for them to discover the right food and nutrition tailored to their unique needs and preferences. However, because of inaccurate and unreliable data, most retailers fail to offer relevant and superior customer experiences to their shoppers. Spoon Guru solves this through verified nutrition data, quality assurance and a closed data ecosystem. Our Nutrition Intelligence helps you to create a truly personalized shopping experience that seamlessly weaves together data, technology, and human expertise to transform the way shoppers discover relevant products and recipes, and interact with food discovery platforms.

High Level Value & KPI Contribution:

Gen AI enhances personalization and convenience, providing better recommendations, and improving customer service.

Customer Experience

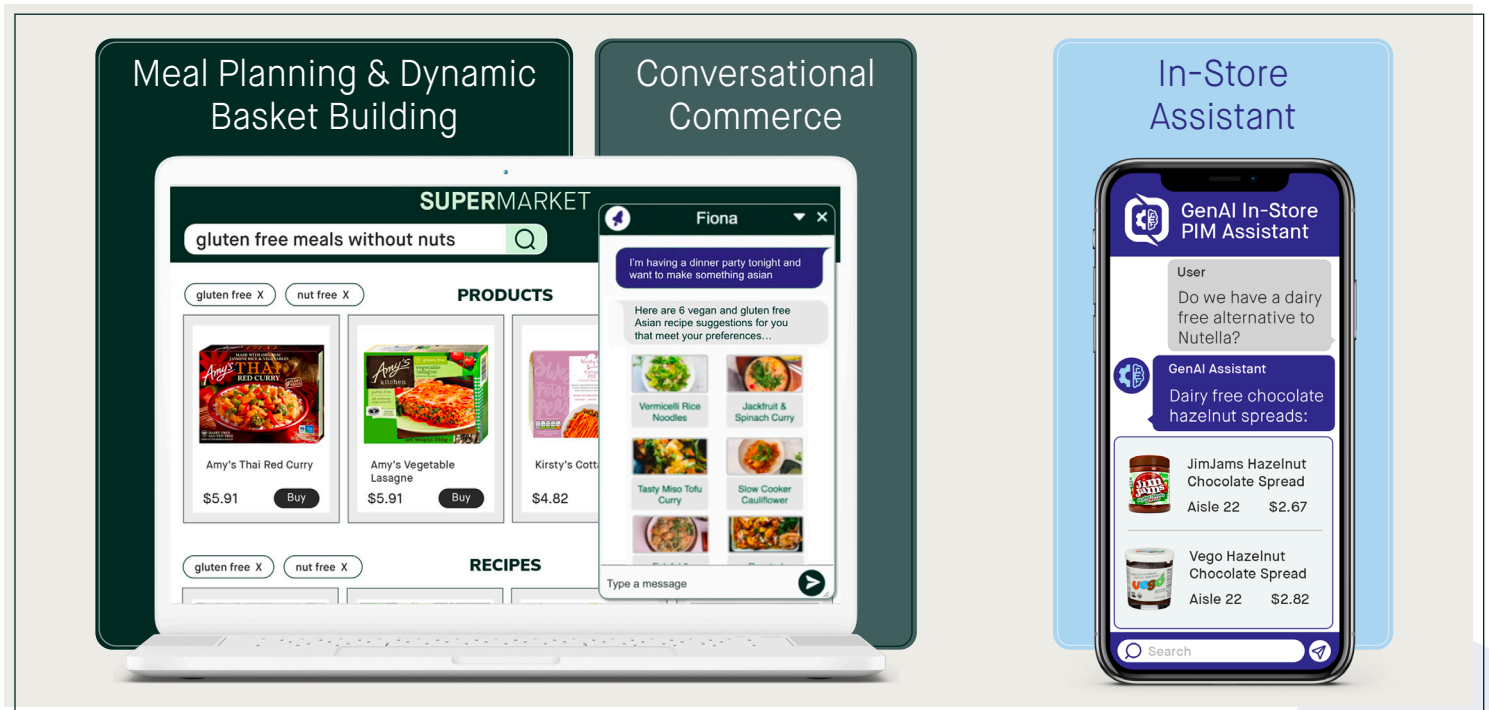

Engagement

Bigger Baskets

Benefitting Teams:

- ✓ eCommerce
- ✓ Customer Experience
